OF THEIR CHIN PROFILE IN
2 TO 4 TREATMENTS.†
UP TO 6 TREATMENTS MAY BE ADMINISTERED.²

†Spaced at least one month apart.

An innovative treatment for FULLNESS UNDER THE CHIN

belkya™
deoxycholic acid injection

WHAT CAUSES FULLNESS UNDER THE CHIN?

Fullness under the chin, sometimes referred to as “double chin,” is a common, yet undertreated, facial aesthetic concern that can impact a broad range of adults, including both women and men. Causes may include:

Aging: It may naturally develop as you age

Genetics: Simply said, it may be part of your DNA

Weight changes: It may be a result of gaining weight

SOMETIMES, no matter how much you diet or exercise, the fullness in this area may not go away, and may make you feel like you look older and heavier than you actually are.

IF YOU'RE BOTHERED BY IT, YOU'RE NOT ALONE

67% of people said they're bothered by fullness under the chin*¹

According to a 2015 survey conducted by the American Society for Dermatologic Surgery (ASDS)

NOW THERE'S BELKYRA™

WHAT IS BELKYRA™?

BELKYRA™ is the first and only non-surgical treatment in Canada for improvement of the appearance of fullness in the area under the chin.²

BELKYRA™

- Is a quick and easy injectable treatment that can be completed in the office in 15- to 20-minutes.³
- Is customized to help you achieve your treatment goals.
- It targets and eliminates fat cells when injected into the fat beneath your chin. Once your goals are achieved, re-treatment is not expected.^{2,4}

HOW DOES BELKYRA™ WORK?

The active ingredient in **BELKYRA™** is deoxycholic acid, a naturally occurring molecule in the body that aids in the breakdown and absorption of dietary fat.²

BELKYRA™ targets and eliminates fat cells when injected into the area under your chin. **BELKYRA™** gradually improves your chin profile over a number of treatment sessions customized by your doctor. Once your desired results are achieved, re-treatment is not expected.^{2,4}

WITH BELKYRA™
YOU CAN IMPROVE THE APPEARANCE
OF YOUR CHIN PROFILE

BELKYRA™ TREATMENT RESULTED IN HIGH PATIENT SATISFACTION

- **Almost 80% of patients** treated with **BELKYRA™** reported satisfaction with the appearance of their face and chin⁴
- **After being treated with BELKYRA™**, patients reported improvement in self-perception, including feeling happier and younger, based on their chin profile, as well as feeling less embarrassed, less self-conscious, less overweight, and less bothered by the fullness under their chin⁴

*American Society for Dermatologic Surgery 2015 Consumer Survey on Cosmetic Dermatologic Procedures (n=7,315). Exact survey language was, "How bothered are you by excess fat under the chin/neck?"
